

ABSTRACT OF THE DISCLOSURE

An apparatus for providing information to a user at a resort,
including a housing configured for being held and/or worn by
the user; a power source for providing power; receiver
5 circuitry situated in the housing for receiving resort-
specific information; a memory unit situated in the housing
and configured to store the resort-specific information;
location determination circuitry including GPS circuitry
configured to receive signals from GPS satellites for
10 determining a geographical position of the apparatus; a
processing arrangement including a communication unit
configured to communicate the resort-specific information to
the user; and a transmitting arrangement configured to
wirelessly transmit at least the geographical position of the
apparatus.
